

ROHAN JAIN

Full Stack Software Engineer | React, Next.js, Node.js, TypeScript

New Delhi, India | +91-8076735870 | jain.rohan911@gmail.com | linkedin.com/in/rohanjain2002 | github.com/Rohanjain96

SUMMARY

Full-stack software engineer with 2.5+ years building performance-sensitive web applications across fintech, trading, and SaaS products. Specialized in the React / Next.js / TypeScript / Node.js stack, with a track record of cutting page-load times, reducing integration defects, and turning engineering-heavy workflows into self-serve tools for non-technical users. Strong across frontend architecture, RESTful API integration, and state management with Redux Toolkit and RTK Query.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3

Frontend: React.js, Next.js, Redux, Redux Toolkit, Redux Toolkit Query (RTK Query), Material UI (MUI), Tailwind CSS, Framer Motion, Formik

Backend & APIs: Node.js, Express.js, REST APIs, JWT Authentication, Socket.IO, WebSockets

Databases: PostgreSQL, MongoDB

Practices: Frontend performance optimization, SSR & caching, responsive UI, API contract design, cross-functional collaboration, code reviews

DevOps & Tools: Docker, Git, GitHub, Jira, Google Analytics, Google Tag Manager

EXPERIENCE

Software Development Engineer I — Pantelwar

Jan 2024 – Present

Noida, India

360 One — Wealth & data platform

- Shipped a guided Excel upload interface that let non-technical analysts self-serve data operations, cutting upload time by up to 30% and removing a recurring dependency on the engineering team.
- Engineered a schema-driven Excel import/export engine in Strapi that auto-generates ingestion logic from content-type definitions and persists structured data to PostgreSQL — eliminating 80% of hardcoded mappings and letting the team onboard new data types without code changes.
- Introduced schema and business-rule validation pipelines with real-time error previews before upload, enabling reliable ingestion and fewer failed loads.
- Architected bulk-upload workflows with transformation, normalization, and partial-failure handling to keep PostgreSQL data consistent under load.
- Designed 6+ RESTful APIs in Node.js and integrated them with Next.js for interactive, analyst-facing data previews, reducing export errors by 20%.

Fingyani — Multi-broker stock trading platform (fingyani.com)

- Built the Fingyani trading frontend from scratch in Next.js and MUI v5, optimizing rendering and data-fetching for page loads up to 30% faster on a latency-sensitive product where responsiveness directly affects user trust and order execution.
- Partnered with backend teams to design and integrate APIs powering multi-broker order execution.
- Reduced redundant network requests by 40% through optimized caching and request lifecycles with RTK Query.
- Defined and standardized API contracts across frontend and backend, decreasing integration bugs by 20%.

Software Development Intern (Full Stack) — Zluri

Aug 2023 – Jan 2024

Remote

- Automated onboarding and offboarding workflows across 10+ SaaS applications.
- Delivered 4+ production features working closely with cross-functional product, design, and backend teams.
- Lowered UI-backend fetch errors by 15% through improved data synchronization.

PROJECTS

Chatify — Real-time Chat Application chat-app-lpen.onrender.com

- Created a real-time chat application on the MERN stack with Socket.IO for messaging and live presence tracking.
- Implemented secure authentication and authorization using JWT.
- Developed modular group and private chat features with a responsive React.js and Chakra UI interface.

EDUCATION

B.Tech, Computer Science & Engineering

Aug 2019 – Jul 2023

HMR Institute of Technology and Management, New Delhi GPA: 8.5 / 10
